(a)
$\alpha_{\text{true}} = 0.3$
(b)
$\alpha_{\text{true}} = 0.5$
(c)
$\alpha_{\text{true}} = 0.8$
(d)
$\alpha_{\text{true}} = 0.5$
$\hat{\alpha} - \alpha_{\text{true}}$ (noise-free data)
$|\text{mean}\,\hat{\alpha} - \alpha_{\text{true}}|$
mesh grading r
input τ, gate $1 - e^{-\beta\tau}$
input (τ, τ^{α}), gate $1 - e^{-\beta\tau}$
input τ, gate $1 - e^{-\beta\tau^{\alpha}}$
input (τ, τ^{α}), gate $1 - e^{-\beta\tau^{\alpha}}$
discrete optimum of the training objective
residual-optimal order for the exact solution
